

Tigerspike Technical Recruitment

Automated Testing Exercise

This is your opportunity to showcase your technical skill with automated testing. Your technical approach should highlight your skills as a Quality Assurance Engineer.

It is not important that you complete the task. What is more important is that you highlight to us your skills and experience in any way that you can.

You can use any tools that you are comfortable with to perform this task.

We would like your work delivered in the form of a private source code repository (eg. Github). Please invite david.miller@tigerspike.com & lavinia.montebon@tigerspike.com to the repository.

Assignment:

Use eBay or Amazon online ecommerce website and automate the below scenario using Selenium Webdriver.

User Story:

As a logged in member I want to search for top 5 brands of any category and add to shopping cart proceed until payment page

- Additionally validate the navigation of pages during checkout process.
- Reading of the test data from a flat file is preferred.
- The automation script should support cross browser execution

We ask you to only spend 8 hours on this exercise. Please deliver whatever is complete after this time. As stated previously we are not looking for a complete solution. The most important thing to us is your approach and that you demonstrate the way that you work.
